About

My name is Jan Friebe, a Germany-based IT specialist in application development with a background in graphic design for both print and digital media. I have a strong passion for software development, where I focus on striking a balance between functionality and visually appealing, intuitive designs. I'm committed to delivering high-quality user experiences, scalable architectures, and clean, maintainable code in every project I undertake.

I am an ambitious and passionate professional with a constant drive to learn and explore new technologies, particularly in frontend development. I thrive in environments that encourage creativity and innovation, always looking for ways to optimize workflows and enhance user interaction. I am not afraid to ask uncomfortable questions if they contribute to optimization and improving the final product.

I always aim to understand the bigger picture and the intricacies that define perfection in a product. I also love teaching, helping others grow, and sharing my knowledge to empower those around me.

Projects

Shopping Cart API
API based invoice generation based on Mirco Framework SLIM PHP

My Portfolio
High-performance portfolio website using static site generator Astro and Tailwind CSS, showcasing a modern and responsive design.

Resume Generator
Resume Generator that renders JSON data into a Handlebars template and utilizes Puppeteer to generate PDF resumes
